Professional Summary

Full-stack and AI engineer in Tokyo with over a decade of experience shipping software teams depend on—B2B platforms, luxury e-commerce, real-time operations, and AI-augmented products for organizations across Europe, the United States, and Asia-Pacific.

A large share of my work today is production AI: embedding LLMs in customer and internal products, designing agent and automation workflows, building retrieval and tool-calling layers, and balancing latency, cost, reliability, and safety before anything reaches users.

I work best where product, design, and engineering meet—translating ambiguous goals into maintainable TypeScript and Python, clear APIs, and interfaces that stay understandable as complexity grows. I have owned critical systems solo, grown delivery teams from scratch, and shipped under strict review with heavy third-party integration.

At Scalyx, a retail technology company, I led full-stack delivery for Sophia Fiori (sophiafiori.com)—a luxury fine jewelry store where I built the Next.js storefront, Python backend, admin panel, and CMS. On the wider Scalyx platform I also develop AI-assisted retail features, including conversational assistants and automation grounded in live business data.

In parallel I build open-source AI software—autonomous browser agents, web research agents, local RAG stacks, and LLM-driven security tooling—so the architectures I use in paid work are grounded in code I have run, measured, and iterated on myself.

I hold a B.E. in Computer Science and Communications Engineering from Waseda University.

Professional Experience

2022 – Present
Tokyo, Japan

Scalyx
Full-Stack & AI Developer

- Led full-stack delivery for Sophia Fiori, a production luxury jewelry e-commerce experience (sophiafiori.com)—storefront, backend services, admin, and CMS.
- Owned architecture and implementation across customer-facing Next.js/React, Python APIs, content management, and internal operations tooling.
- Shipped catalog, merchandising, and checkout flows for a live fine-jewelry brand; site powered by the Scalyx retail stack.
- Design and ship LLM-powered retail features—conversational assistants, operational automation, and integrations with observability and guardrails suitable for production.
- Contribute to shared engineering standards across AI and full-stack codebases (typing, CI, API contracts, and safe model usage patterns).

TypeScript, Next.js, React, Python, Node.js, PostgreSQL, Docker, AWS, GCP, LLM APIs

08/2021 – 04/2022
Remote

Seidat Oy
Senior Web Developer

- Delivered features on Seidat's Meteor.js + React presentation platform within an Nx monorepo.

- Integrated Pipedrive and additional third-party services into the live product.
- Participated in rigorous code review—shipping reviewed work and reviewing peers' pull requests.

TypeScript, React, Meteor, MongoDB, Nx, Docker, Kubernetes, GCP

2020 – 2022

United Hardscapes Inc
Director of Technology
- Owned technology strategy and delivery: marketplace, company sites, and internal admin for hardscaping operations.
- Led integrations and acted as the main technical contact for clients and business stakeholders.

NestJS, PostgreSQL, React, TypeORM, Socket.IO , AWS, Tailwind CSS

2019 – 2020

AmericaBuild Technology
Technical Lead & Full-Stack Engineer
- Built and maintained scalable B2B infrastructure as the primary engineer for permit-management organizations.
- Developed a feature-rich admin panel with D3.js analytics alongside a WordPress marketing site for content updates.

Java, Spring, PostgreSQL, Angular, Docker, WordPress

Education

04/2014 – 03/2018
Tokyo, Japan

Bachelor of Engineering
Waseda University
B.E. in Computer Science and Communications Engineering

Technologies

Frontend
- TypeScript
- JavaScript
- React
- Next.js
- Angular
- HTML/CSS
- Tailwind CSS

Data
- PostgreSQL
- MongoDB
- MySQL

Backend
- Node.js
- NestJS
- Python
- FastAPI
- Java/Spring
- GraphQL
- REST

Platform
- Docker
- Kubernetes
- AWS
- GCP
- GitHub Actions
- CI/CD

AI & ML
- LLM integration
- RAG
- AI agents
- LangChain
- Prompt evaluation

Blockchain & Web3
- Solidity
- Smart contracts
- NFT marketplaces
- Web3.js

Projects

Sophia Fiori - Luxury E-Commerce
Online fine jewelry store built at Scalyx: I designed and delivered the public storefront, backend APIs, admin panel, and CMS for sophiafiori.com —from catalog and collections to merchandising and checkout. Powered by Scalyx on the infrastructure side.

Next.js · React · Python · PostgreSQL · Admin panel · CMS

ARTEX
AI-assisted autonomous security testing platform with a Go backend and Next.js dashboard—task orchestration, findings, asset graphs, and human-in-the-loop agent chat.

Go · Next.js · LLM agents · Graph visualization

Telegram Account Manager
Web control plane for large-scale Telegram operations—manage hundreds of accounts from one place and run Telegram's native capabilities through automation (messaging, sessions, and account workflows). Python backend with a Next.js management UI.

Python · Next.js · Telegram API · Multi-account automation

Seidat Sales Platform
Enterprise presentation and sales-flow product. Delivered features in a Meteor + React Nx monorepo with CRM integrations and strict review culture.

Meteor · React · MongoDB · Nx monorepo · GCP

Offline Candlestick Trainer
Educational offline candlestick chart app: FastAPI serves read-only market data to a React UI with multi-timeframe aggregation—no external APIs at runtime.

FastAPI · React · Vite · SQLite · Financial data

AgentGPT
Browser-based autonomous AI agent platform—goal-driven task loops, tooling, and UI for running agents without leaving the web client.

TypeScript · Autonomous agents · Browser runtime

Research AI
Python research agent that searches the web and writes structured reports—explores retrieval, planning, and output formatting outside production traffic.

Python · Web search · Report generation

Local RAG Chatbot
Fully local RAG pipeline for private document Q&A—embeddings and chat without sending files to third-party services.

Python · Local LLMs · Embeddings

Intelico One
B2B security asset management admin—complex workflows and role-based access on a long-lived Angular and ASP.NET stack.

C# · ASP.NET · Angular · Azure

HawkAyes NFT Marketplace
Solidity contracts and Web3.js integration for an NFT marketplace—representative of earlier Web3 and DeFi work.

Solidity · Web3.js · BSC
